

Date: 20 July 2019. 98/4/29.

Patient's Name: A.A.

Responsible Physician: Dr.Jalaeefar.

Patient Presentation:

-A 48 year old female with right breast mass underwent excisional biopsy with no axillary staging.

-Pathology examination reported IDC, T=2cm, ER-, PR-, HER2-, Ki67 5%; margins' status were not determined.

-In axillary ultrasound LNs reported to be suspicious.

Question: What should be done first, NAC or completion surgery?

Recommended Plan: Surgery is recommended now.
