Patient's Name: Z.E.L

Responsible Physician: Dr.Alipour

Patient presentation: A 35 year- old woman with right breast mass who underwent right MRM + CHRT about two years ago, desires to left side prophylactic mastectomy
FH: Rectal cancer (her aunt)
Surgical Pathology: IDC, multifocal multi-centric, DCIS high grade, free margins, 2/11 LN, ER+(80%), PR-, HER2 -(1+), Ki67 10-12%

Question:

What's the next plan?

Are left side prophylactic mastectomy and reconstruction recommended?

Recommendation:

1.Genetic consult and test before any procedure are recommended.
