Patient's Name: F.J.H

Responsible Physician: Dr.Elahi

Patient presentation: A 40 year-old woman with left breast cancer (T4N2) who underwent NACT then left mastectomy , also presented a right axillary suspicious lymph node

PEx: Left T4N2M0 and right Axilla LAP and chest wall involvement(?)

Left breast CNBx: IDC

Right Axillary LN CNBx: IDC

Metastasis W/U: negative

Question:

What's the surgical plan after NACT?
Is rib involved?

Recommendation:

1. There isn't any rib involvement.
2. Breast MR
3. Left mastectomy & right mastectomy after NAC are recommended .
