

Date: 10.07.2021;1400.04.19

Patient's Name: S.R

Responsible Physician: Dr.Omranipour

Patient presentation:

A 65 year-old woman with DCIS in breast VABx and multiple liver metastases lesions in CT

VABx: DCIS, G2, ER+, HER2+

CT: multiple liver metastases

Pathology review: DCIS

Colonoscopy/Endoscopy: obstruction? (The patient does not have any symptoms)

T markers: CEA(2762), CA15-3(1064)

Colon Biopsy (transverse colon): inflammation

Breast CNBx: IDC, ER+, HER2+, Ki67 20%

Surgery: 1.liver biopsy: metastatic carcinoma, GATA+, HER2+ 2.sigmoidectomy: colon cancer, Stage2 3.Breast lumpectomy & SLNB: IDC, T=2.5cm, negative SLNBx

Question:

What is the next plan?

Recommendation:

1.Xeloda and breast cancer protocol with Herceptin in chemotherapy course.
