

Date: 31.07.2021; 1400.05.09

Patient's Name: J.M.Ch

Responsible Physician: Dr.Aghili

Patient presentation:

A 53 year- old woman with left breast cancer and extensive skin involvement since 7 years ago (93) without any treatment until last year (99) underwent CNBx and chemotherapy.

CNBx: invasive metastatic carcinoma, ER+, PR+, HER2-, Ki67 6-8%

Question:

Is she operable?

Recommendation:

- 1.She is not operable(curative surgery)
- 2.Radiotherapy then hormonotherapy is recommended.
