

Date: 18.09.2021; 1400.06.27

Patient's Name: N.K

Responsible Physician: Dr.Babae

Patient presentation:

A 43 year-old woman with right breast bloody nipple discharge and No mass in US and MG, then Low grade DCIS confirmed via CNBx in turkey.

MG & US: No mass

CNB: low grade DCIS

MR: NME & Extensive DCIS in right breast and probably atypical papilloma in left breast

Question:

What's the next plan?

Recommendation:

1. Right side: mastectomy and SLNBx (with or without immediate reconstruction)
2. Left side: wire guided excisional biopsy or CNBx
