

Date: 11.12.2021; 1400.09.20

Patient's Name: A.Gh

Responsible Physician: Dr.Alipour

Patient presentation: A 58 year-old lady presented with breast cancer

Pathology: IDC, ER+, PR+, HER-, KI67 5 %

MRI: bone metastasis in C6-C12 & L1-L5

She underwent chemotherapy & had good response.

PET-CT: no bone metastasis

Breast sonography: 6 mm mass in 5 o'clock mid zone left breast B6 and 7 mm mass 4 o'clock mid outer zone left breast B4a

Breast mammography: prior suspicious mass at left lower central B4b

MRI vertebral: normal

Question:

What's the next plan?

Are breast & axillary surgery needed?

Recommendation:

Primary site surgery.
