

Date: 18.12.2021; 1400.09.27

Patient's Name: P.N

Responsible Physician: Dr.Davari

Patient presentation: A 38 year-old lady with positive FH presented with breast pain & mass.

Sonography: increased thickening in UIQ of left breast and suspicious axillary LNs

Mammography: microcalcification in UIQ of left breast

CNB: IDC, ER +, PR+, HER2 -, Ki67 8 %

CNB axilla: positive

Bone scan: negative

Thoracic CT: LN in level 2-3 axilla & mediastinum

Abdominal CT: Normal

Question:

Surgery or systemic therapy?

Are the mediastinal LNs malignant?

Recommendation:

Genetic test is recommended.

CD of her CT scan is needed to be reported.

NAC & mastectomy & XRT
