

Date: 10.16.2021; 1400.07.24

Patient's Name: Z.K

Responsible Physician: Dr.Miri

Patient presentation: A 34 year-old woman with intraductal papilloma in both breasts & had bloody discharge from nipple

MRI: duct ectasia, tubular enhancing structures, enhancing mass in right breast

She underwent total duct excision

Pathology: hyperkeratosis & crust formation

After COVID vaccine injection she had bloody discharge again

Question:

What is the next plan?

Recommendation:

New MRI of breast

If no finding is found in MRI then ductography is indicated.
