

Date:15.01.2022; 1400.10.25

Patient's Name:F.S

Responsible Physician: Dr.Golfam

Patient presentation: A 75 year-old lady presented recently with Left axillary lump

FH: breast cancer in her daughter

PMH: IHD - good performance

PE: Huge breast, palpable firm LN in left axilla

Mammography: ACR:B,suspicious LN in left axilla.

Sonography: FCC in both breasts + suspicious LN in left axilla (4a)

CNB LN: Metastatic lobular breast carcinoma luminal A

Bone scan: one lesion in rib

Thorax, abdomen & pelvis CT scan: No metastasis.

MRI was requested but its report isn't ready yet.

Question:

- 1.What's the next plan? Only hormone therapy?
- 2.Upfront surgery(mastectomy or ALND & breast XRT)
- 3.NAC then mastectomy
- 4.NAC then ALND & breast XRT

Recommendation:

Bone biopsy & mastectomy & adjuvant radiotherapy: if she has metastasis then only chemotherapy is recommended & if not then all of the above treatments are recommended.
