

Date: 12.03.2022; 1400.12.21

Patient's Name: Sh.A

Responsible Physician: Dr.Alibakhshi

Patient presentation: A 43 year-old lady presented with left breast mass in 1398 that underwent lumpectomy & the result was fibroadenoma. 6 months ago she had a new mass with increasing in size.

Sonography: mass 87*57 mm B4a

CNB: benign phyllodes

She underwent excision of mass.

Pathology: borderline phyllodes 12 cm, DCIS, margin free

Question:

What's the next plan?

Recommendation:

Review pathology & IHC of DCIS are recommended if the result is going to be confirmed as DCIS then hormone therapy with or without RTX & if not no more treatment is needed.
