

**Date:** 18.11.2023; 1402/08/27

**Patient's Name:** K.ZN

**Responsible Physician:** Dr.Esphandbod

**Patient presentation:** A 54 year-old woman with negative family history who underwent right BCS, ALND and Radiotherapy in year 1400. She has Persistent cough and no other symptoms.

**Pathology:** Tumor size: 19mm, Stage: N0, ER: positive, PR: positive, HER-2: negative, Ki67: 15%.

**CT scan:** multiple metastases in Bone, Lung and Liver.

**Review of CT scan:** No Lung metastases.

**Bronchoscopy and BronchoAlveolarLavage:** Normal.

**Question:**

- What is the next treatment plan? (Chemotherapy or Palbocab or just Hormonotherapy?)

**Recommended plan:**

- Palbocap and Hormone therapy since no symptoms are seen.

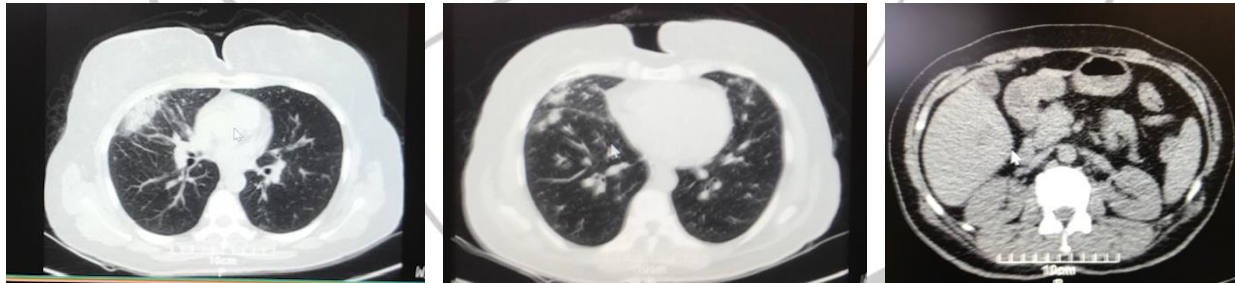

Figure 1, 2, and 3: CT scan shows Liver Metastasis and no Lung Metastases.
