

Date: 17.06.2023; 1402/03/27

Patient's Name: D.M

Responsible Physician: Dr.Omranipour

Patient presentation: A 78 year-old woman history of left Mastectomy in 1395, ER: positive, HER-2: positive. She had local recurrence and underwent Chest wall resection in 1400. Again she had local recurrence in bilateral skin lesion and she underwent right mastectomy and left skin resection in 1402.

Pathology: ER: negative, HER-2: positive, Sternum involved with tumor (High risk for resection).

Question:

Does she need surgery or not??

Recommended plan:

Surgery is not recommended for now.

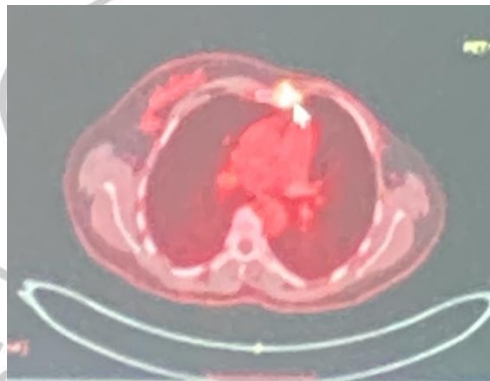

Figure1: PET scan shows Sternum Involvement
