Patient's Name: A.K

Responsible Physician: Dr. Jalaieefar

Patient presentation: A 64 year-old woman with right breast mass T4b, she underwent Breast-conserving surgery and Axillary lymph node dissection (ALND).

FNA: Positive.

Pathology: 22mm mass, Lymph nodes: 0/6.

Sonography: Was done in the middle of chemotherapy and suspicious Axillary lymph nodes were found but FNA was non diagnostic.

Question:

What is the treatment plan for Axilla?

Recommended plan:

1. Complete chemotherapy course.
2. ALND review.
3. Wire excision of suspicious lymph node.
