

Date: 02.09.2023; 1402/06/11

Patient's Name: F.M

Responsible Physician: Dr.Gomar

Patient presentation: A 59 year-old woman known case of cancer, she had undergone:

1383: Right MRM, Chemotherapy and Tamoxifen intake.

1393: Left BCS and SLNB.

1401: Left MRM (Grade: 2, LVI: positive, LNs: 4), Exemestan, Palbociclib and Radiotherapy.

Now in 1402 she presented with Horner syndrome and Lymphedema.

PET scan: Paratracheal and supraclavicular LNs.

Question:

What is the treatment plan?

Does she need Radiotherapy or not?

Recommended plan:

- 1- Systemic therapy
- 2- Radiotherapy is not recommended.

Figure1: PET Scan shows paratracheal Lymph Node
