

**Date:** 09.03.2024; 1402/12/19

**Patient's Name:** A.M

**Responsible Physician:** Dr.Aziminejadan

**Patient presentation:** A 72 year-old woman with history of right breast cancer in year 1396 who underwent BCS and SLNB (0/1) (IDC, ER: negative, PR: negative, HER-2: double positive, FISH: negative, Ki67: 60%, Tumor size: 10mm, Grade: 3, Margins: free). She underwent Adjuvant Chemo-radiotherapy.

Now she has a 7mm left breast mass. She underwent Vacuumed resection of lesion then and complete basket vacuum resection for margins: IDC, Tumor size: 4mm, Grade: 2, ER: positive, PR: positive, HER-2: negative, Ki67: 10%, Basket: free. No suspicious lymph node in any imaging.

**Question:**

Is she a candidate for adjuvant therapy and no more surgery?

**Recommended plan:**

- No further surgery, Endocrine therapy with or without systemic therapy.
