

Date: 06.01.2024; 1402/10/16

Patient's Name: H.D

Responsible Physician: Dr.Hashemi

Patient presentation: A 50 year-old woman left Breast cancer in year 1397. She underwent BCS, Chemotherapy and Radiotherapy. (CNB: ER: positive, PR: positive, HER-2: triple positive, Ki67: 50%). Before start of Radiotherapy there was a relapse in surgery site FLAP as Nodule and mass in right Breast and Axilla. She had relapse in the same breast in year 1401. After 6 sessions of Chemotherapy due to no response, she underwent MRM on MDT's decision. She has taken Herceptin, Letrozole and Pertozomab after surgery.

Pathology: IDC, Tumor size: 140mm, ER: positive, PR: positive, HER-2: positive, Ki67: 30%.

Question:

What is the treatment plan?

Recommended plan:

- 1- Mastectomy of right Breast.
- 2- Deep biopsy of left side's flap.
- 3- Herceptin and change aromatase inhibitor.

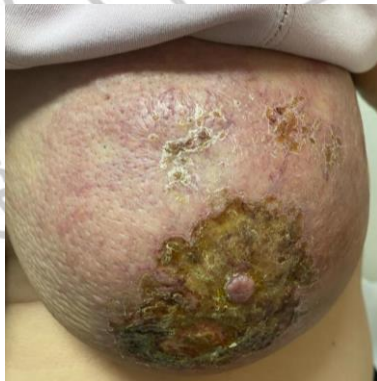

Figure 1: After first surgery.

Figure2: After second surgery, recurrence.
