Patient's Name: M.G

Responsible Physician: Dr.Ebrahimi

Patient presentation: A 35 year-old woman with history of breast augmentation 7 years ago. Now she is 3 month pregnant and has rupture of prosthesis and no clinical symptoms.

Imaging: 4 lymph nodes infiltrated with silicon, and the rupture is extra-capsular.

Question:

What is the next plan?

Recommended plan:

- Surgery of prosthesis and resection of infiltrated nodes after child birth.
