

**Date:** 30.12.2023; 1402/10/09

**Patient's Name:** N.M

**Responsible Physician:** Dr.Majidinejad

**Patient presentation:** A 67 year-old woman with Breast mass and multiple palpable Axillary lymph nodes. She underwent 4 cycles of NAC, Odor Ulcer and erythema in axilla and loss of motor activity of ipsilateral upper limb

**Biopsy:**

Breast: IDC, Grade: 3, ER: 100%, PR: 100%, HER-2: negative, Ki67: 50%.

Axilla: Metastatic node

**MRI:** Positivity of axillary nodes in level 1, 2 and 3, without nerve invasion

**Doppler sonography of upper limb:** No thrombosis in vascular system.

Surgery and radio oncologist consultation while continuing chemotherapy: Not a surgery candidate and due to loss of motor activity of upper limb radiotherapy is not possible.

**Question:**

Consultation for reviewing MRI and possibility of surgery or radiotherapy?

**Recommended plan:**

- 1- Brachial plexus MRI is recommended.
- 2- Change cytotoxic chemotherapy to Aromatase Inhibitor and Palbociclib.
