Patient's Name: NA

Responsible Physician: Dr.Ebrahimi

Patient presentation: A 62 year old woman with a mass felt in her left breast UIQ.

Physical exam: Small mobile firm mass

Sonography: A 13mm mass in 11 O'clock of left breast. Axilla is normal.

Mammography: Irregular margin mass in left UIQ

CNB: IDC, ER: positive, PR: positive, HER-2: negative, Ki67: 2-3%.

She underwent BCS and SLNB, margins free and 2 SLNs are uninvolved.

Due to favorable pathology chemotherapy omitted, after 4 sessions of XRT.

Sonography done for seroma evaluation, incidentally one suspicious intramammary lymph node found in UOQ which was infiltrated by cancer according to CNB.

Question:

What is the best next plan?

Recommended plan:

- 1- Wire excision of intramammary lymph node
- 2- Oncologist consult (Chemotherapy 50-50)
- 3- RT high tangent

Figure1: Mammography shows spiculated mass.
