

Date: 18.05.2024; 1403/02/29

Patient's Name: F.S

Responsible Physician: Dr.Pasalar

Patient presentation: A 60-year-old woman who noticed a suspicious lesion during the screening mammography, Sonography showed microlobulated mass measuring 17mm at 2 o'clock position mid zone of left breast compatible with new mammographic findings which showed vascularity in color Doppler exam (B4c) which was a biopsy suggesting papilloma with ADH. The patient underwent BCS & SLNB, which was a pathology suggesting tall cell carcinoma with reversed polarity (Tumor size: 17mm, Grade: I, LVI: negative, Triple negative, Ki67: 5%, N 0/1 at least DCIS).

Question:

What is the best treatment plan?

Recommended plan:

- No additional treatment
