Patient's Name: A.B

Responsible Physician: Dr.Omranipour

Patient presentation: A 36-year-old woman who undergone BCS & ALND due to left breast cancer (IDC, Grade: 2, LVI: negative, ER: 90%, PR: 40%, HER-2: negative, Ki67: 20%). According to the final pathology (Tumor size: 17 mm, Grade: 2, LVI: negative, SLNB: 1/3, non-sentinel LN: 0/6) she has undergone chemotherapy for 8 sessions. According to the lesions of the opposite breast and multiple biopsies (multiple fibroadenoma), she undergoes bilateral skin sparing mastectomy and reconstruction with retro pectoral implant. Pathologic results show bilateral benign lesion.

Question:

What is the next treatment plan?

Recommended plan:

- PMRT (Post Mastectomy Radiotherapy)
