

Date: 15.06.2024; 1403/03/26

Patient's Name: Z.A

Responsible Physician: Dr.Ebrahimi

Patient presentation: A 43 year old woman came to office for routine screening with negative family history.

Mammography: New segmental pleomorphic micro-calcification 3-4 o'clock mid to near zone, totally measured 68*23 mm.

Sonography: Compatible with the aforementioned micro-calcification heteroechoic non-mass is 13*5 mm in 3 o'clock near zone, BIRADS: 4c.

US-guided CNB: Fatty breast tissue with lobular hyperplasia.

Question:

Surgery or mammography guided VAB should be done?

Recommended plan:

- VAB recommended

Figure 1: Mammogram shows suspicious microcalcification in 3-4 o'clock.
