Patient's Name: F.R

Responsible Physician: Dr.Mohagheghi

Patient presentation: A 58 year-old woman who had right breast mass and underwent BCS, ALND, 3 cycles of Chemotherapy in UK, Radiotherapy in year 1378 and Tamoxifen intake for 6 years. She has not attended for follow-up for 5 years and a Mammography was performed.

Mammography: Focal asymmetry in left breast.

Sonography:

Breast: Right: BIRADS: 4c,

Left: BIRADS: 5, suspicious lymph node in left Axilla.

Abdomen: Cystic lesion in left adnexa with normal tumor markers.

CNB: Right: papillary lesion,

Left: IDC, Grade: 2, LVI: positive, Lymph nodes: positive, ER: positive.

Question:

What is the treatment plan?

Recommended plan:

- 1- Bilateral mastectomy
- 2- Laparoscopic Salpingo-oophorectomy
