

Date: 17.02.2024; 1402/11/28

Patient's Name: Z.E

Responsible Physician: Dr.Esphandbod

Patient presentation: A 55 year-old woman with right Breast mass and positive node in Axilla.

CNB: IDC, ER: positive, PR: negative, HER-2: triple positive, Ki67: 20-25%.

Biopsy of Axilla: Metastatic.

MRI: Mass in both Breasts.

Bone scan: Sternal metastasis.

CT scan: Suggestive of bone metastasis.

Question:

What is the treatment plan?

Recommended plan:

- 1- Bone scan review: No Metastases
- 2- MRI review suggestion: Target sonography of left breast and Biopsy of right breast probably inflammatory.

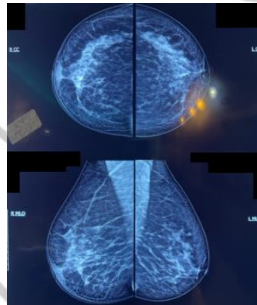

Figure 1: Mammogram.

Figure 2: Skin erythema.

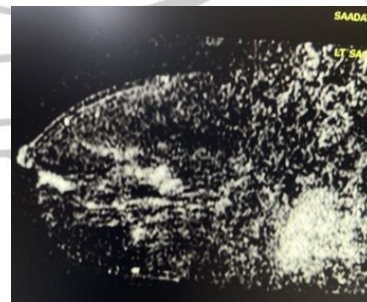

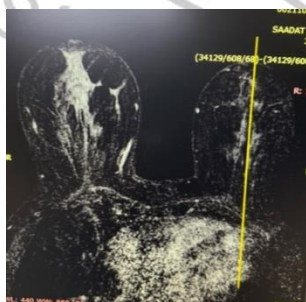

Figure 3 & 4: MRI shows Breast mass.
