

**Date:** 13.04.2024; 1403/01/25

**Patient's Name:** S.H

**Responsible Physician:** Dr.Esphandbod

**Patient presentation:** A 42 year-old woman with left breast IDC and multiple bone metastases has been treated with Aromasin, Zometa and chemotherapy. In the course of treatment, oophorectomy was performed for the patient. The patient referred due to the redness of the breast and the increase in the size of the breast tumor, which was found to be a stable metastasis.

**Question:**

What is the best treatment plan?

**Recommended plan:**

- Mastectomy
