

Date: 27.04.2024; 1403/02/08

Patient's Name: N.B

Responsible Physician: Dr.Omranipour

Patient presentation: A 33-year-old woman who underwent mastectomy and sentinel lymph node biopsy due to a right breast IDC (Grade: 2, ER: positive, PR: positive, HER-2: negative, Ki67:15%). After surgery, she underwent 8 courses of chemotherapy and is currently a candidate for INRT due to micro-metastasis in sentinel lymph node.

Question:

Is PMRT indicated in this patient?

Recommended plan:

- 1- 4 courses of TC
- 2- Post Mastectomy Radiotherapy: 50-50%
