

Date: 02.11.2024; 1403/08/12

Patient's Name: M.V

Responsible Physician: Dr.Esphandbod

Patient presentation: A 62-year-old woman presented with left IDC 12 years ago and underwent BCS and SLN (IDC, ER: 30%, PR: 25%, HER-2: triple positive, Ki67:15%). She received adjuvant therapy.
Pet scan (1403): Suspicious lesion in lung and iliac.

Question:

What is the next treatment plan?

Recommended plan:

- PET scan was reviewed, the appearance of lesions is normal so she doesn't need any treatment.

Figure 1: PET CT scan doesn't show any pathologic lesion.
