

**Date:** 28.09.2024; 1403/07/07

**Patient's Name:** E.R

**Responsible Physician:** Dr.Gomar

**Patient presentation:** A 34-year-old woman with triple-negative breast cancer (Ki67: 90%) metastatic to the right and left supraclavicular lymph nodes is a candidate for chemotherapy.

**Question:**

Is mastectomy possible in this patient?

**Recommended plan:**

- Continue chemotherapy
