

Date: 24.08.2024; 1403/06/03

Patient's Name: M.M

Responsible Physician: Dr.Sarkarde

Patient presentation: A 41-year-old woman with breast cancer (T4N2, Triple Negative) with metastasis to the liver has undergone chemotherapy. Currently, she has a sore and infected mass in her right breast.

Question:

What is the next treatment plan?

Recommended plan:

- Palliative treatment with or without Operation

Figure 1, 2 & 3: Ulcerative and infected right breast mass.

Figure 4 & 5: CT scan shows metastasis in liver and pathologic paraaortic LAP, breast mass in CT scan.
