

Date: 24.08.2024; 1403/06/03

Patient's Name: S.B

Responsible Physician: Dr.Sarkarde

Patient presentation: A 34-year-old woman referred for surgery after chemotherapy for breast cancer (IDC, ER, PR: positive, HER-2: negative, Ki67: 25%). The breast mass was not clipped and the patient requested to preserve the breast.

Question:

What is the next treatment plan?

Recommended plan:

- SSM with or without reconstruction

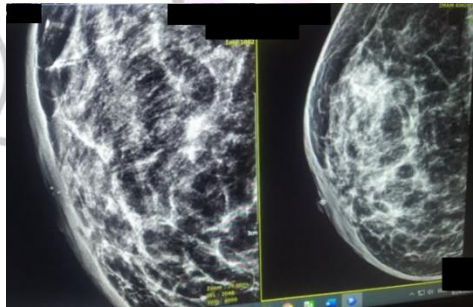

Figure 1: MG shows dense breast and skin thickening in NAC.
