Patient's Name: M.B

Responsible Physician: Dr.Omranipour

Patient presentation: A 47-year-old pre-menopausal woman with a 35-mm breast mass, which was detected multi-centric in MRI, underwent skin sparing mastectomy, implants reconstruction and SLNB. The final pathology revealed a 6.5 cm ILC, Grade: 1, SLN: 0/3. The patient underwent 4 sessions of chemotherapy..

Question:

Is Post Mastectomy Radiotherapy recommended?

Recommended plan:
