

**Date: 23.11. 2024 ; 1403/09/03**

**Patient's Name: SA**

**Responsible Physician: Dr. Sarkardeh**

**Patient presentation:** A 38 Y/O F presented with left breast mass:

(1402/12)

IDC III/ER : 10-20%/PR:1-10%/Her2:-/ki67:50%

She underwent NAC, but didn't respond to NAC, after 7th session of chemotherapy MRM (1403/5/31)

(1403/8) She was admitted because of sever erythema in mastectomy site, leukocytosis & ESR>100

Anti-biotic therapy, and wound debridement were done for her.

No source of infection was found.

No response to treatment was observed.

**Pathology of wound:**

Invasion of carcinoma in dermis & epidermis with direct skin ulceration

ER-/GATA3-/LCA-/CK AE1/AE3+

**BMA:**

Metastases or AML

**Question:**

What should we do?

**Recommended plan:**

Systemic therapy
