

Date:31.05.2025;1404/03/10

Patient's Name: R.GH

Responsible Physician: Dr. Sarkarde

Patient presentation:

52 Y/O woman with history of left breast cancer in 1402
She underwent left MRM (IDC G3 LN: 4/12) and adjuvant chemo and RT
And was receiving letrozole afterwards
In her annual MG: 2 group of microcalcification in UOQ of right breast (B4b)
VAb bx was performed 2 times:
ADH was reported
And in her MG review the patient was advised to perform another VAB

Question:

Best plan?

Recommended plan:

Mastectomy or perform another biopsy (patient decision)
