

Date: 29.02. 2025; 1403/12/11

Patient's Name: SA

Responsible Physician: Dr. Esfandbod

Patient Presentation:

A 58 Y/o F, presented with Lt. breast mass (IDC, ER +, PR +, HER-2: -) and metastatic lesions in liver. She received chemotherapy (weekly Taxol). Then Aromasin + Palbociclib replaced Taxol because of severe thrombocytopenia.

In recent CT scan: (reviewed)

Progression in liver metastases (cirrhosis), splenomegaly + Esophageal varices, new lesions in lung & bones suspicious to metastases

Liver lesions.

Question:

Next plan?

Recommended plan:

Aromasin & Palbociclib change to another agents
