

**Date:** 14.12. 2024 ; 1403/09/24

**Patient's Name:** BA

**Responsible Physician:** Dr. Alipour

**Patient presentation:** A 48 Y/O female with Lt. breast mass

She has a positive familial history in her mother, so she was under observation and experienced several biopsies (benign lesions such as sclerosis and ADH), the latest one:

Lt. breast CNB:

IDC III, High grade DCIS, ER-, PR-, HER2: -, KI67: 20-25%

Genetic test: negative

She asks for a prophylactic mastectomy

**Question:**

What is the best treatment?

**Recommended plan:**

Bilateral mastectomy +SLNB by surgeon judgement
