

Date: 21.12. 2024; 1403/10/01

Patient's Name: FP

Responsible Physician: Dr. Jafarloo

Patient presentation: A 55 y/o female known case of Rt. inflammatory Breast cancer (ER+, PR+, Her2: -, ki67:15%)

She underwent Rt. MRM 5 years ago (1398) & XRT & Endocrine therapy

After 3 years, she underwent surgical site resection, 3 ribs resection, and reconstruction with latissimus flap because of chest wall recurrence

Currently, she has recurrence in the chest wall and metastasis in her lungs

She is receiving chemotherapy

Question:

Next Plan?

Recommended plan: Chest CT scan was reviewed, the lung nodule wasn't suspicious

PET scan, then surgery advised
