

Date: 10.01.2026; 1404/10/20

Patient's Name: T.N

Responsible Physician: Dr. Omranipour

Patient presentation:

65 Y/O female with right breast cancer (ER+, PR+, HER-2:+, Ki67:5%),

PET scan: right iliac bone metastasis (SUV: 39.17), MRI and biopsy confirmed metastasis

She received palbociclib and AI and primary tumor resection was advised by oncologist

She underwent mastectomy (pT: 2.5cm, G2, SLNB: negative)

Question:

Does she need radiotherapy to iliac bone?

Recommended plan:

The case was not discussed.
