

Date: 01.11.2025; 1404/08/10

Patient's Name: Z.H

Responsible Physician: Dr. Larijani (Onco-surgery fellowship)

Patient presentation:

33 Y/O female with history of breast cancer in paternal aunt
Unremarkable follow ups until 1404/06

US: oval shape mass, 8 o'clock, 22*9 mm, B4a, clinically negative axilla

MG: B1

But in simultaneous US evaluation: solid oval mass, 8 o'clock, far zone,
21*11mm

1404/07:

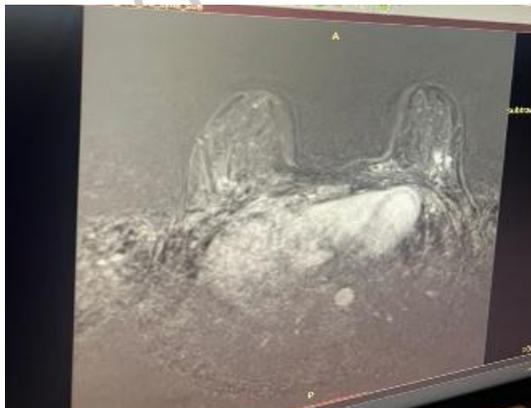

Left breast mass excision

DCIS, G1-G2, solid & cribriform pattern, suspicious margin,
fibroadenomatoid mastopathy.

Second opinion: intermediate grade intraductal carcinoma superimposed
in fibroadenoma, free margins

ER: 90%, PR: 50%, Her2: Neg,

BRCA gene mutation result is pending

Question:

What is the next treatment plan? Re-excision or systemic therapy?

Recommended plan:

Perform left breast targeted U/S.

Margin re-excision if nothing new is found.

Genetic consult.
