

**Date: 06.12.2025; 1404/09/15**

**Patient's Name: M.SH**

**Responsible Physician: Dr. Sarkardeh**

**Patient presentation:**

72 Y/O female with left breast mass, U/S:35\*30mm, 5-6 o'clock, mid zone (B4-5) with normal axilla, MG: central-lower part mass 40\*30mm with no skin thickening, skin retraction, microcalcification, satellite lesion(B4-5),

CNB: IDC, triple negative, Ki67:30-35%,  
NACT (8sessions)

She underwent MRM (10/1403): IDC, pT: 2\*2\*2mm, G1/3, probable response, invasive carcinoma margin: free from tumor, distance from closest margin: cannot be assessed(Tumor detected microscopically), ALND:0/18

**1404/05:** U/S: cystic collection with solid component, CNB: poorly differentiated carcinoma with sarcomatoid features.

**Question:**

What is treatment plan?

**Recommended plan:**

The MDT recommended performing wide local excision and radiotherapy.
