

Date: 10.01.2026; 1404/10/20

Patient's Name: M.F

Responsible Physician: Dr. Esfandbod

Patient presentation:

Multiple fibroadenomas which showed increased size in one of them and CNB showed spindle cell sarcoma. She underwent bilateral mastectomy (sarcoma). XRT was given

3month after XRT: **PET scan:** Lt axilla and lung masses: all biopsied and sarcoma confirmed. She received 4 course of chemotherapy.

PET scan: metastatic lesions in lung which showed elevated SUV

Question:

What is the treatment plan?

Recommended plan:

Due to numerous lesions, there is no indication for local treatment. She is candidate to receive pazopanib.
