

Date: 01.11.2025; 1404/08/10

Patient's Name: B.L

Responsible Physician: Dr. Sarkardeh

Patient presentation:

67 Y/O female with right breast mass
12*12mm, 10 o'clock, far zone, B4c + suspicious
Right LN + suspicious left LN
CNB: IDC, G2, ER: 90%, PR: 60-70%, Her2: neg,
Ki67:7-8%, right LN pathology: positive for malignancy.
Left LN suspicious: Schwsnnoma (S100: Positive, SOX10: positive,
vimentin: Positive)

Question:

How left LN pathology affect treatment plan?

Recommended plan:

Left axilla should be followed and no surgery is needed.
Right breast should undergo BCS+SLNB.
