

Date: 15.11.2025; 1404/08/24

Patient's Name: Z.J

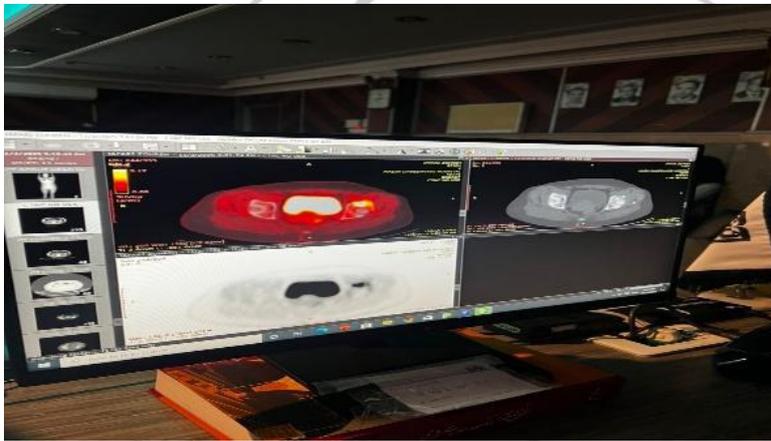

Responsible Physician: Dr. Sarkardeh

Patient presentation:

44 Y/O female, left breast mass U/S: 27*25mm, B5, 3 suspicious LN in left
CNB: IDC, ER: 80%, PR: 40%, HER-2:0, Ki667:10-15%

FNA axilla: positive for malignancy

PET scan: bone metastasis

Question:

Is she a candidate for curative chemotherapy or hormone therapy alone?

Recommended plan:

Acetabulum is prone to fracture so orthopedic and radio-oncology consults.
Inoperable so systemic treatment with palbociclib and AI and re-evaluation
after completion.
