

Date: 29.11.2025; 1404/09/08

Patient's Name: M.A

Responsible Physician: Dr. Omranipour

Patient presentation:

55 Y/O female

1400/03: previous BCS+SLNB
IDC, G3, DCIS: present, EIC: Neg, free margins, LVI: Pos,
Pathologic stage: T1N0
ER: 60-70%, PR: 5%, HER-2: Neg, Ki67:25%
8 sessions of Chemotherapy+ No RT

1400/10: MST + breast Implant
Uneventful follow ups until CA 15-3 rise

PET scan: local tumoral recurrence medial to the prothesis in the right side of chest wall, in close contact with sternal body.
First MDT recommended surgery for resection.
Nothing pathological was found clinically.
Second MDT after surgery recommended close F/U with U/S PET and CA 15-3.
Pathology report came invasive carcinoma

Question:

What is treatment plan?

Recommended plan:

MDT Recommended to perform PET at 2 month from surgery and if anything was found perform CT guided biopsy.
