

Date: 22.11.2025; 1404/09/01

Patient's Name: M.A

Responsible Physician: Dr. Nima Musavi

Patient presentation:

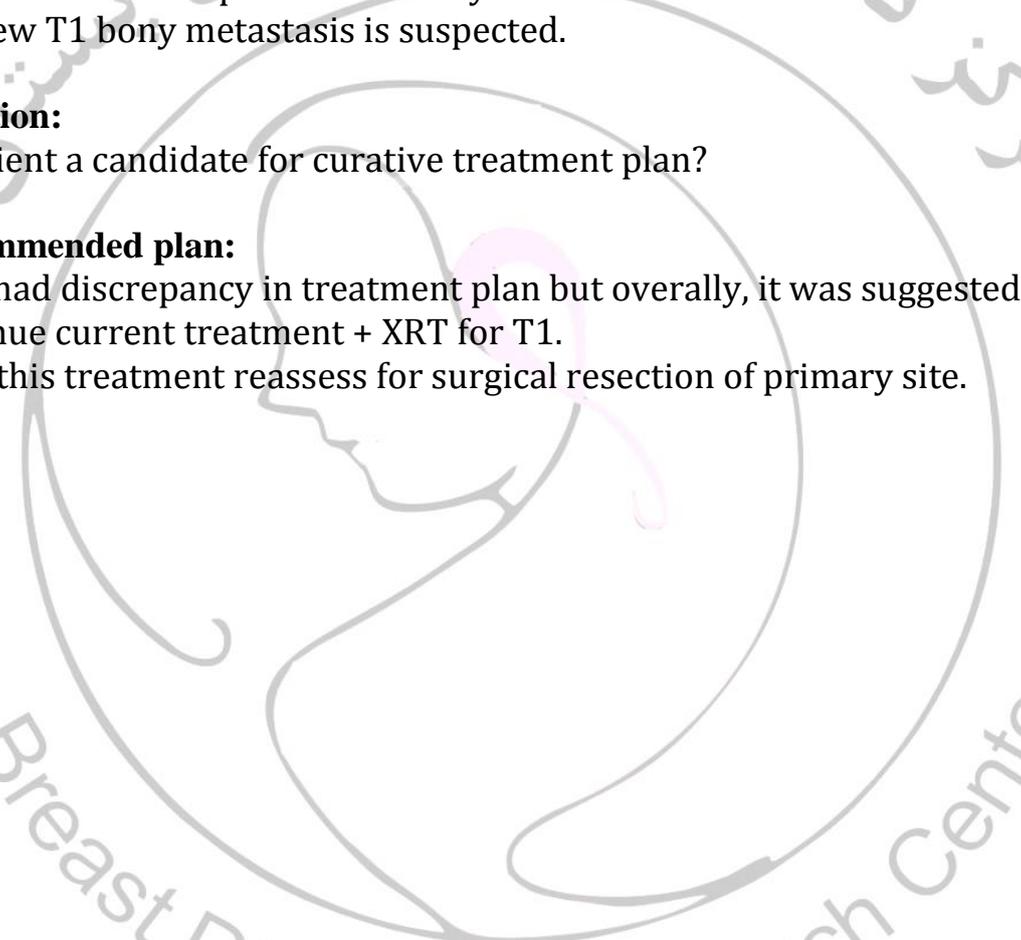

45 Y/O female with, left TNBC (locally advanced), Bx proven axilla LAP, 3cm lesion in superior mediastinum, she underwent CHT+IO,
New PET CT Scan: previous axillary and mediastinal nodes are resolved but new T1 bony metastasis is suspected.

Question:

Is patient a candidate for curative treatment plan?

Recommended plan:

MDT had discrepancy in treatment plan but overall, it was suggested to continue current treatment + XRT for T1.
After this treatment reassess for surgical resection of primary site.
