

**Date: 10.01.2026; 1404/10/20**

**Patient's Name: M.Y**

**Responsible Physician: Dr. Sarkarde**

**Patient presentation:**

39 Y/O female with breast mass from 2,5 years ago but no treatment until

**1404/05:**

MG: 91\*85mm mass in UIQ

U/S: 10-12 O'clock, far zone, 83\*58mm+left axilla LAP

CNB: IDC, ER: +, PR: +, HER-2:+3, Ki67:45-50%

Pulmonary CT scan: metastatic nodule of right lung

Abdominal CT scan and bone scan: no metastasis

She underwent NACT

**Question:**

New pulmonary CT scan is done. Is lung metastasis confirmed?

**Recommended plan:**

Continue antiher2 treatment and radiotherapy of the breast.
