

Date: 06.09.2025; 1404/06/15

Patient's Name: KH.S

Responsible Physician: Dr. Omranipour

Patient presentation:

1398:

Underwent BCS and adjuvant

Chemo RT afterwards she was receiving Tamoxifen since then which was switched to Letrozole in 1400.

She has now presented with a bone pain and lesion in the 5th rib (visible in PET and MRI) and is currently receiving palbociclib plus aromatase Inhibitor

PET review:

Up take in surgical bed

Uptake in left axilla:

Question:

Document review and decision making?

Recommended plan:

Discontinue Ck4/6 inhibitor (due to lack of metastasis)+ axillary ultrasonography .
