

Date: 04.10.2025; 1404/07/12

Patient's Name: N.T

Responsible Physician: Dr.Ebrahimi

Patient presentation:

A 39 Y/O lady with Hx of Rt TNBC 3 years ago who underwent 6 sessions of chemotherapy, followed by BCT&SLNB (1 Cm tumor residue + 3 free sLns)30 sessions of RTx and 4 courses of zeloda .

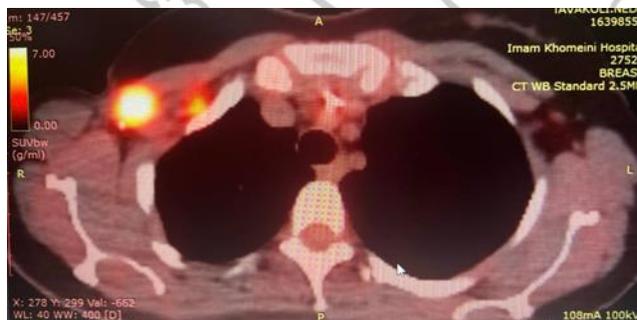

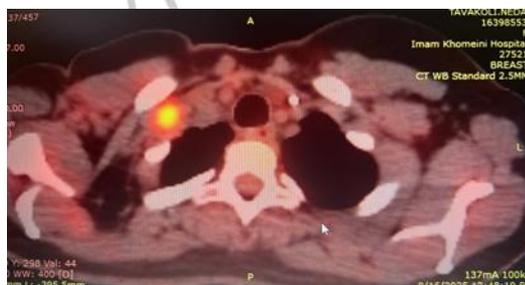

1 year later axillary recurrence treated through ALND and chemotherapy without RNI.

5 months ago she experienced supraclavicular (or infraclavicular!) and inter-pectoral recurrence. Which had increase in size in 2 consecutive PET-CT scans (3 months)

Navelbin administered for her, and with some interval ZakAria started for her.

Negative genetic evaluation.

New infraclavicular and inter-pectoral Recurrence

Question:

What's the Plan?

Recommended plan:
Surgical excision and XRT
