

Date: 06.09.2025; 1404/06/15

Patient's Name: S.H

Responsible Physician: Dr.Sarkardeh

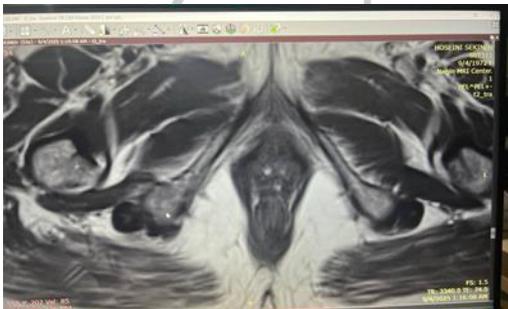

Patient presentation:

53 Y/O woman with hx of left breast cancer 1403 underwent BCS+SLNB
And adjuvant chemo +XRT

After 1 year she presented with 15mm mass in US in the same breast: B4
Bx results: fat necrosis

Now she has suspicious lesions in Bone scan in 8th rib and right ischium

MRI: is non diagnostic

Question:

Imaging review?

Recommended plan:

No suspicious lesion / Follow up are recommended.
