

Date: 08.11.2025; 1404/08/17

Patient's Name: P.A

Responsible Physician: Dr. Omranipour

Patient presentation:

43 Y/O female, positive FH in her mother, left breast papillomatosis in UOQ and lateral based on MRI who underwent VAB with 3-4 mm pieces

IDC, ER: 70%, PR:60%, HER-2: neg, Ki67: 10-15%

She underwent mastectomy+SLNB+DTI and one focus of DCIS with no invasive component was found

Question:

Considering the fact that there is no precise size for the resected tumor in VAB, what is the adjuvant treatment?

Recommended plan:

She is candidate for endocrine therapy.
